What is an Enhanced Multi-Use Corridor?

Enhanced Multi-Use Corridors (EMUC) are street corridors that provide safe, comfortable, low-stress bicycle and pedestrian facilities, much like a multi-use trails, to provide connectivity within the City’s trail system and multi-modal transportation network.

These facilities can look different depending on the characteristics of the street and the right-of-way available.

Typical Facility Types

- Sidewalks or shared-use sidewalks
- Bicycle facility
  - Shared lanes
  - Bike lanes
  - Buffered or protected bike lanes

Next Steps

Additional elements that will take place before EMUCs are implemented:

- Parking utilization studies
- Traffic counts
- Intersection approach treatments
- Final designs

Schedule

2017
- Complete EMUC Plan
- Identify parking utilization studies
- Traffic counts
- Intersection approach treatments

2018
- Identify funding sources for high-priority corridors
- Data collection and analysis of later-priority corridors

2019 and beyond
- Begin to implement high-priority corridors
- Data collection and analysis of later-priority corridors
