

WANT YOUR WATER METER OUTSIDE?

The scoop: we offer a program for single family home and multi-family duplex owners to relocate the water meter from inside the house to an outside meter pit .

The benefit: the City would no longer need to enter the house to verify a reading, perform maintenance or change the water meter.

The cost: expenses are shared between the City and you, the property owner. The City pays for all labor required to build an outdoor pit and install a new meter; the customer/property owner only pays for the cost of the pit assembly parts, plus any landscape restoration needed. The meter pit parts charge of \$389.82 can be placed on your utility bill and paid in 1 to 12 monthly installments. Work to relocate your meter will only begin after the utility billing contract or pre-payment is confirmed.

The next step: if you want to take advantage of this program, please call or email us to discuss the details and get your project started.
